n as inverse element of m n . 2. Prove that if G is an abelian group, then for all $a, b \in G$ and all integers n , $(ab)^n = a^n b^n$.
Solution: We resort to induction to prove that the result holds for positive integers. For $n = 1$, we have $(a \ 1b)^1 = ab = a \ 1b^1$. So the result is valid for the base case. Suppose result holds for $n = k$, i.e. $(ab)^k = a^k b^k$.
